### Instructions to Authors

*NZ Science Review* provides a forum for the discussion of science policy. It covers science and technology in their broadest sense and their impacts on society and the environment, both favourable and adverse. It also covers science education, science planning and freedom of information. It is aimed at all scientists and decision makers, and the interested public. Readability and absence of jargon are essential.

Manuscripts on the above topics are welcome, two copies of which should be sent to:

The Editor  
NZ Association of Scientists  
P O Box 1874  
Wellington

As well as full papers, short contributions, reports on new developments and conferences, and reviews of books, all in the general areas of interest of the journal, are invited. The journal also accepts reviews of a general nature and research reports.

Full manuscripts (with author's name removed) will be evaluated and authors will be sent copies of the reviewer's comments and a decision on publication. Manuscripts should not normally have appeared in print elsewhere but already published results discussed in the different, special context of the journal will be considered. They should preferably not exceed 2500 words.

To facilitate anonymous review, author's names on manuscripts and any acknowledgements of assistance should be on a detachable cover page. Manuscripts should be accompanied by biographies of not more than 100 words on each author's personal history and current interests. Authors are also expected to supply a suitable photograph of themselves.

Manuscripts should be typed double-spaced with wide margins on one side of the page. Articles may be submitted in common wordprocessor formats on floppy disk. Tables and figures should be on separate pages with a note in the text to indicate their approximate position, eg "Table X about here".

All tables, figures and plates should be numbered separately: Tables 1, 2, 3, 4, etc, and Figures 1, 2, 3, 4, etc. Footnotes should be eliminated as far as possible. Black and white photographs may be submitted for consideration for publication.

References should preferably be cited by the Harvard system as described in the NZ Government Printing Office *Style Book*, 3rd ed. (1981), p. 21. This system entails citing each author's surname and the year of publication in the text and an alphabetical listing of all author's cited at the end. Occasionally an alternative system may be justified and this is acceptable provided that it is used accurately and consistently.
